PROBLEM SOLVING · MAKE DECISIONS

Prediction Ledger

Build your calibration history — predict, state your confidence, then meet reality.

Name _____

Started _____

THE PREDICTION *specific & time-bound — outcome will clearly become known*	CONFIDENCE *% before*	WHAT ACTUALLY HAPPENED *recorded after*	GAP *felt vs actual*	SURPRISE LOG *what did reality know that I didn't?*

THE PATTERN I'M SEEING

after ten to twenty predictions — where does my confidence stop tracking reality?

_____

_____

MY CALIBRATION RULE

one rule, bound to a trigger — the change I leave with

When I'm _____ , I'll _____ before I commit.

_____

Confidence is a feeling, not evidence.

State the confidence before the outcome · one prediction teaches little, a calibration history teaches a lot · always close with a rule.
